

Listing of the Claims:

The following is a complete listing of all the claims in the application, with an indication of the status of each:

- 1 1. (Currently Amended) A portal site data providing device for reading an
2 ID from a portable terminal, receiving a user-input portal specifying
3 information and storing in a reversibly removable memory medium of the
4 portable terminal a portal site address for the portable terminal to
5 subsequently access a portal site built according to the user-input portal
6 specifying information, comprising:
7 ~~an input device for receiving information inputted by a user and~~
8 a data reading/writing device for reading/writing data from/to the a
9 reversibly removable memory medium, arranged for by-mounting the
10 memory medium which is reversibly removable from the portable terminal,
11 and arranged to read the ID from the portable terminal for providing, to the
12 ~~memory medium of the portable terminal, information regarding a portal~~
13 ~~site which is displayed when connecting to a network using the portable~~
14 ~~terminal, the portal site data providing device further comprising:~~
15 a portal specifying information receiving device for receiving a user-
16 input portal specifying information specifying user selection from among a
17 plurality of portal site content options ~~which specifies contents of a portal site~~
18 ~~from a user through the input device; and~~
19 an address data storage communication device for transmitting the
20 user-input portal specifying information to an external portal address data
21 storage apparatus and for receiving, from the address data storage apparatus
22 a corresponding user-specific portal site ~~reading out the address data~~
23 indicating an address for the portable terminal to subsequently access
24 ~~accessible to the portal site which is specified by~~ according to the user-input
25 portal specifying information,

26 ~~wherein the from an address data storage apparatus in which the~~
27 ~~address data is stored in advance through a data reading/writing device is~~
28 ~~arranged to store the corresponding user-specific portal site~~ reading out the
29 ~~address data appended to the ID read from the portable terminal in for~~
30 ~~storing it to the memory medium of the portable terminal.~~

1 2. (Currently Amended) The portal site data providing device of according to
2 claim 1, further comprising:

3 a display device for displaying prescribed information to a user; and a
4 display control device for displaying portal contents information
5 showing the contents of various portal sites, the display device being
6 arranged to read the portal contents information on the display device by
7 reading it out from a portal contents information storage apparatus in
8 which the portal contents information ~~showing the contents of various portal~~
9 ~~sites is stored in advance, wherein~~

10 ~~the portal specifying information receiving device receives the portal~~
11 ~~specifying information from a user for showing contents of a portal site~~
12 ~~which is selected and specified by the user according to the portal contents~~
13 ~~information displayed on the display device.~~

1 3. (Currently Amended) The portal site data providing device of according to
2 claim 1, wherein

3 the portable terminal is a GSM-type portable telephone, and the
4 memory medium of the portable terminal is a ~~an~~ SIM card.

1 4. (Currently Amended) The portal site data providing device of according to
2 claim 2, wherein the portal contents information stored in the portal contents
3 information storage apparatus unit is information regarding various websites
4 which can be accessed in advance through the portal site.

1 5. (Currently Amended) A portal site data providing device for reading an
2 ID from a portable terminal, receiving a user-input portal specifying
3 information and storing in a memory medium of the portable terminal a
4 portal site address for the portable terminal to subsequently access a portal
5 site built according to the user-input portal specifying information,
6 comprising:

7 an input device for receiving information inputted by a user and
8 a data reading/writing device for reading/writing data from/to the a
9 memory medium of being built in to be mounted to the portable terminal, for
10 providing, to the memory medium of the portable terminal, the data
11 reading/writing device arranged to read the ID from the portable terminal,
12 information regarding a portal site which is displayed when connecting to a
13 network using the portable terminal, the portal site data providing device
14 further comprising:

15 a portal specifying information receiving device for receiving a user-
16 input portal specifying information specifying user selection from among a
17 plurality of portal site content options which specifies contents of a portal site
18 from a user through the input device; and

19 an address data storage communication device for transmitting the
20 user-input portal specifying information to an external portal address data
21 storage apparatus and for receiving, from the address data storage apparatus
22 a corresponding user-specific portal site reading out the address data
23 indicating an address for the portable terminal to subsequently access
24 accessible to the portal site which is specified by according to the user-input
25 portal specifying information,

26 wherein the from an address data storage apparatus in which the
27 address data is stored in advance through a data reading/writing device is
28 arranged to store the corresponding user-specific portal site reading out the
29 address data appended to the ID read from the portable terminal in for
30 storing it to the memory medium of the portable terminal.

1 6. (Currently Amended) The portal site data providing device of ~~according to~~
2 claim 5, further comprising:

3 a display device for displaying prescribed information to a user; and a
4 display control device for displaying portal contents information
5 showing the contents of various portal sites, the display device being
6 arranged to read the portal contents information on the display device by
7 reading it out from a portal contents information storage apparatus in
8 which the portal contents information showing the contents of various portal
9 sites is stored in advance; wherein

10 ~~the portal specifying information receiving device receives the portal~~
11 ~~specifying information from a user for showing contents of a portal site~~
12 ~~which is selected and specified by the user according to the portal contents~~
13 ~~information displayed on the display device.~~

1 7. (Currently Amended) The portal site data providing device of ~~according to~~
2 claim 6, wherein the portal contents information stored in the portal
3 contents information storage apparatus ~~unit~~ is information regarding
4 various websites which can be accessed in advance through the portal site.

1 8. (Currently Amended) The portal site data providing device of ~~according to~~
2 claim 7, wherein:

3 the portal specifying information receiving device is arranged to
4 receive ~~has a function of receiving~~ website specifying information for
5 selecting and specifying a website displayed on the display device; and

6 the portal site data providing device comprises: [[:]]

7 a portal screen data building device arranged for building a portal
8 screen data which shows display data related to an address data accessible
9 to the website selected and specified according to the website specifying
10 information, and

11 ~~wherein instead of~~ the address data storage device [[,]] comprises a
12 portal screen data storage device for storing the portal screen data built by
13 the portal screen data building device in the memory medium of the
14 portable terminal through the data reading/writing device.

1 9. (Currently Amended) The portal site data providing device ~~of according to~~
2 claim 7, wherein:

3 the portal specifying information receiving device is arranged to
4 receive ~~has a function of receiving~~ website specifying information for
5 selecting and specifying a website displayed on the display device;

6 the portal site data providing device comprises a portal information
7 transmitting device for transmitting the website specifying information as
8 the portal information to a portal managing server which manages portal
9 information of the user present on a network; and

10 the address data stored in the memory medium of the portable
11 terminal by the address data storage device is an address data accessible to
12 a portal site built by the portal managing server according to the portal
13 information transmitted to the portal managing server.

1 10. (Currently Amended) The portal site data providing device ~~of according~~
2 ~~to claim 9, wherein the portal information transmitting device~~ is arranged
3 to transmit ~~transmits~~ an identification data peculiar to a user, which is
4 inputted through the portal specifying information receiving input device, to
5 the portal managing server by including it in the website specifying
6 information.

1 11. (Currently Amended) The portal site data providing device ~~of according~~
2 ~~to claim 9, further comprising an identification data reading-out device for~~
3 reading out identification data peculiar to a user being stored in advance in
4 a memory medium from the memory medium of the portable terminal

through the data reading/writing device, wherein
the portal information transmitting device is arranged to transmit
~~transmits~~ the identification data read out by the identification data reading-
out device to the portal managing server by including it to the website
specifying information.

12. (Currently Amended) The portal site data providing device ~~of according~~
~~to claim 5~~, wherein the portable terminal is a GSM-type portable telephone,
and the memory medium of the portable terminal is ~~a~~ a SIM card.

13. (Currently Amended) A method for supplying portal site data ~~to using a~~
~~portal site data providing device for functioning to store information~~
~~regarding a portal site which is displayed when connecting to a network~~
~~through a portable terminal~~, the method comprising:

providing a portable terminal having a pre-stored unique ID and
having a reversibly removable memory medium;

providing a portal site managing system having a data
reading/writing device for reading from and writing to the reversibly
removable memory medium;

reading the ID from the portable terminal and transmitting the read
ID to the portal site managing system;

receiving a user-input portal site content specifying information
indicating a user selection from among a plurality of portal site content
options;

generating, in the portal site managing system a user-specified portal
site building information based, in part, on the user-input portal site
content specifying information;

storing in the portal site managing system the user-specified portal
site building information, the storing being retrievable based on a portal site
address data having the received ID;

21 storing, in the memory medium of the portable terminal the portal
22 site address data having the received ID, further comprising
23 a portal-specific information receiving step in which the portal site
24 data providing device receives portal specifying information which specifies
25 contents of a portal site from a user through an input device; an address
26 data reading out step in which the portal site data providing device reads
27 out, from an address data storage device to which the address data is stored
28 in advance, an address data accessible to the portal site which is specified
29 according to the portal specifying information; and an address data storing
30 step for storing the address data in a memory medium of the portable
31 terminal by a data reading/writing device provided to the portal site data
32 providing device; and
33 a memory medium mounting step for taking out removing the
34 memory medium from the portable terminal and mounting it to the data
35 reading/writing device at least before the storing, in the memory medium of
36 the portable terminal, the portal site address data having the received ID
37 address data storing step.

1 14. (Currently Amended) A method for supplying portal site data to using a
2 portal site data providing device for functioning to store information
3 regarding a portal site which is displayed when connecting to a network
4 through a portable terminal, the method comprising:

5 providing a portable terminal having a pre-stored unique ID and
6 having a memory medium;

7 providing a portal site managing system having a data
8 reading/writing device for reading from and writing to the memory medium;

9 reading the ID from the portable terminal and transmitting the read
10 ID to the portal site managing system;

11 receiving a user-input portal site content specifying information
12 indicating a user selection from among a plurality of portal site content

13 options;

14 building, in the portal site managing system a user-specified portal
15 site based, in part, on the user-input portal site content specifying
16 information;

17 storing in the portal site managing system the user-specified portal
18 site, the storing being retrievable based on a portal site address data having
19 the received ID; and

20 a portal specific information receiving step in which the portal site
21 data providing device receives portal specifying information which specifies
22 contents of the portal site from a user through an input device; an address
23 data reading-out step in which the portal site data providing device reads
24 out, from an address data storage device to which the address data is stored
25 in advance, an address data accessible to the portal site which is specified
26 according to the portal specifying information; and an address data storing
27 step for storing the address data in a memory medium which is built in the
28 portable terminal by a data reading/writing device provided to the portal
29 site data providing device, and

30 at least before the storing in the memory medium of the portable
31 terminal of the portal site address data having the received ID address data
32 storing step, a portable terminal mounting step for mounting the portable
33 terminal to the data reading/writing device so that the data reading/writing
34 device becomes accessible to the memory medium built in the portable
35 telephone.

15-19. (Canceled)

1 20. (Currently Amended) A computer program product comprising computer
2 executable instructions stored on a computer-readable medium which, when
3 executed by the computer,

4 configure the computer to control a portal site data providing device

5 to read an ID from a portable terminal;

6 configure the computer to control a display of the portal site data
7 providing device to display portal site content options based, at least in part,
8 on the ID read from the portable terminal;

9 configure the computer to receive a user-input portal site content
10 specifying information indicating a user selection from among the displayed
11 portal site content options;

12 configure the computer to build a user-specified portal site based, in
13 part, on the user-input portal site content specifying information, including
14 configuring the computer to control a portal site building data storage device
15 for storing information for forming the portal site to be supplied to the
16 portable terminal [[:]] and configuring the computer to control a portal
17 information storage device for storing portal information which selects and
18 specifies a website inputted by a user to the portal site data providing device
19 by receiving it from the portal site data providing device;

20 configure the computer to store the built user-specified portal site, the
21 storing being retrievable based on a portal site address data;

22 configure the computer to control the portal site data providing device
23 to write the portal site address appended with the ID into a memory of the
24 portable terminal;

25 ~~portal-site distribution program, used for a portal managing server~~
26 ~~which supplies a portal site to a portable terminal in an access by being~~
27 ~~connected through a network to a portal site data providing device which~~
28 ~~writes an address data accessible onto a memory medium of a portable~~
29 ~~terminal to be an access target of the address data, the program achieving:~~

30 ~~a portal site building device for building, based on the information~~
31 ~~stored in the portal site building data storage device, a portal site which~~
32 ~~shows a display data accessible to the website specified by the portal~~
33 ~~information in response to an access from the portable terminal; and~~

34 configure the computer to control a portal site information

35 distribution device for transmitting the information for displaying the built
36 portal site to the portable terminal.

21. (Canceled)
